**Convert from Cartesian (  $x, y$  ) to polar coordinates before integrating**

- Find  $\iint_D f(x, y) dA$  where  $D$  is the region bounded by the  $x$ -axis, the line  $y = x$  and the circle  $x^2 + y^2 = 1$ .

$$\iint_D f(x, y) dA = \int_0^{\frac{\pi}{4}} \int_0^1 f(r \cos(\theta), r \sin(\theta)) r dr d\theta$$

- Find the volume of the solid bounded by the paraboloid  $z = 4 - x^2 - y^2$  and the  $xy$ -plane.

$$V = \int_{-2}^2 \int_{-\sqrt{4-x^2}}^{\sqrt{4-x^2}} (4 - x^2 - y^2) dy dx = \int_0^{2\pi} \int_0^2 (4 - r^2) r dr d\theta = 8\pi$$

- Find the volume inside the sphere  $x^2 + y^2 + z^2 = 25$  and outside the cylinder  $x^2 + y^2 = 9$ .

$$V = \iint_D (\sqrt{25 - x^2 - y^2} - 0) dA = 2 \int_0^{2\pi} \int_3^5 \sqrt{25 - r^2} r dr d\theta = \frac{256}{3}\pi$$

- Find the volume inside the sphere  $x^2 + y^2 + z^2 = 25$  and outside the cylinder  $(x - 1)^2 + y^2 = 1$ .

[This is a project problem but a hint is to write the equation of the cylinder in polar coordinates.]
