### Exam #4 Redo

You have the option of redoing *one* problem from Exam #4. I will score this redo and then replace your original score with your new score. This redo is still part of a test situation to assess your understanding so you must work independently under the following rules:

- Do your own work.
- You may consult your returned exam, your class notes, and the course text. Do not consult other sources.
- Do not discuss generalities or specifics of the exam with anyone except me. I will limit my comments to deciphering anything I've written on your exam that might be illegible.

Use the following guidelines in preparing your submission:

- Submit your work by the beginning of class on Thursday, April 29. No late submissions will be accepted.
- Submit your work in a neatly written form that is clearly laid out. This will almost certainly require doing a rough draft before preparing a final version.
- Use the back of this sheet for your submission or use separate paper that you staple to this sheet.
- Indicate which problem you are redoing in the space provided above.
- Give your original score on the problem you are redoing in the space provided above.
- Give your original total score for the exam in the space provided above.
- Sign the statement below attesting that you have honored the instructions for working independently. If, for some reason, you cannot sign in good faith, come talk with me.

*By signing below, I attest that I have completed this exam redo independently according to the rules given above.*
